AGENDA:

01. Max sum out of all possible subarr
02. Find sum of all subarr sums (Google & Fb)
03. Max subarr sum with length k

Q1. Given an arr of integers, find sum of all possible subarrays of array & maintain the maximum sum.

$$A[] = \{1, 2, 3\}$$

sub arr	<u>sum</u>	
[0 0] = {1}	1	
[0 1] = {1, 2}	3	
[0 2] = {1, 2, 3}	6	
[1 1] = {2}	2	<u>Ans = 6</u>
[1 2] = {2, 3}	5	
[2 2] = {3}	3	

Bf → Find all the subarrays, iterate & get sum of subarray → maintain the overall maximum.

ans = $-\infty$

```

for (i=0 ; i<n ; i++) {
    for (j=i ; j<n ; j++) {
        sum = 0
        for (k=i ; k<=j ; k++) {
            sum += A[k];
        }
        if (sum > ans) ans = sum;
    }
}

```

TC: $O(n^3)$

SC: $O(1)$

* Optimisation 1 : Use prefix sum Approach

```
if (st==0)    sum= pf [end]  
else          sum= pf [end] - pf [st-1];
```

* Construct $pf[n]$ array..

```
ans= -∞  
for (i=0 ; i<n; i++){  
    for (j=i ; j<n; j++){  
        sum=0  
        if (i==0)  sum= pf [j];  
        else      sum= pf [j] - pf [i-1];  
        if (sum>ans) ans=sum;
```

TC: $O(n^2)$
SC: $O(n)$

* Idea 3 → Use carry forward Approach
